

1. Update .env: Add the 3 Azure lines to the server's .env file.

2. Install & Restart: Run npm install in the backend so the server downloads the new Azure packages, and then restart the server (or rebuild the Docker container).

3. Run node migrate.js: Run this command on the server to safely push all the old development images into Azure.

STEP 1 :

- **Update .env in strapi.**

Add the following just below the current .env

Febno Technologies - Azure blob storage

AZURE_ACCOUNT_NAME=febnofiles

AZURE_ACCOUNT_KEY=iBSS3wS/9/ft3BGRDJBUUw+rZD4oitluNhRXk0P8MnXofz

AZURE_EXPORTS_CONTAINER=exports-dev
AZURE_BACKUPS_CONTAINER=backups-dev

STEP 2

Run Command in strapi terminal.

1. npm install.

Then restart the server (or rebuild the Docker container)

STEP 3

Run this command on the server

1. node migrate.js
